

FABIO SDRINGOLA MARANGA

Full-Stack Engineer

Profile

Full-Stack Engineer with 2+ years of professional experience building high-performance web applications and geospatial systems. Specialized in NestJS microservices, React interfaces, and spatial data management with PostGIS and Deck.gl. Currently developing remote control interfaces for robotics (drones and robotic dogs) at EagleProjects. Focused on microservices architecture, spatial data pipelines, and test-driven delivery.

Experience

FULL-STACK ENGINEER | ROBOTICS & GEOSPATIAL SYSTEMS | AT EAGLEPROJECTS | PERUGIA, ITALY | 2023 TO PRESENT

- Architected and migrated 5+ backend services to NestJS microservices, reducing inter-service coupling and improving deployment speed across the core platform.
- Built a real-time geospatial rendering engine with Deck.gl and PostGIS, enabling smooth rendering and editing of 1M+ map features with sub-second interaction latency.
- Developed low-latency remote control interfaces for 2+ robotic platforms (drones and robotic dogs) using React and Node.js, collaborating directly with hardware engineers to meet real-time responsiveness requirements.
- Integrated Encore.ts into the backend workflow and established E2E and unit test coverage using Playwright and Jest, reducing regression risk and improving team code confidence.

Education

- Ironhack — Full-Stack Web Development Bootcamp · May–Jun 2023 (React, Node.js, REST APIs, MongoDB)
- University of Perugia — Radiology Technology · 2014–2017
- Rice University, Houston TX — ESL Program · May–Jul 2018

Skills

- Frontend: React, Next.js, Angular, TypeScript, Tailwind CSS, Sass
- Backend: NestJS, Node.js, Go (Golang), RESTful APIs, Microservices
- Geospatial: Deck.gl, PostGIS, Mapbox, OpenLayers, GeoServer
- Testing & Infra: Playwright, Jest, Encore.ts, E2E Testing
- Databases: PostgreSQL, PostGIS

AI Agentic Development

- Agentic stack: OpenCode with MCP (Model Context Protocol) servers for tool-augmented AI workflows
- Agent context engineering: Design and maintain SKILL.md, SOUL.md, and AGENTS.md to define agent capabilities, behavioral constraints, and orchestration rules
- MCP server integration: Connect AI agents to external systems (APIs, filesystems, databases) via MCP protocol for real-world task execution
- Prompt & context architecture: Structured context layering for reliable, deterministic agent behavior in production environments

Languages

- Italian — Native
- English — TOEFL 92 (B2/C1)
